

Chanimal Generic Site Plan-O-Gram

Overview

The attached documents show a sample plan-o-gram that shows the pages and hierchy for a standard software website.

The items with a dashed line and check in the top right corner are web pages, but they are not linked within the site navigation buttons—they typically have links or icons within the parent page that link to them.

Directions

The sample pages have most of the elements that you will use. Delete the pages that you don't need, add additional product pages (only one product is provided as a sample—you would replicate most of the content for each product page) and you are on your way.
