# Continuous Data Protection for Microsoft® Exchange

## He Lost Everything.

### Feeling Sick Yet?

72% of Exchange Administrators have experienced an Exchange disaster.\* Downtime has ranged from two to over 96 hours. The cost to the organization in lost productivity and restoration can exceed tens of thousands of dollars per incident.

### You Thought You Were Covered

You thought your organization was protected by implementing clustering, replication, archiving and nightly tape backups. Even if restoration from nightly backups succeeds, your organization can lose an entire day of data—often hundreds to thousands of invaluable documents and e-mails!

As the Exchange administrator, your reputation *and* job is on the line.

### None of This Had to Happen

Don't get blamed, get up-to-the minute protection with DigiVault™—providing Continuous Data Protection (CDP) with SingleTouch™ recovery for Microsoft® Exchange.

With DigiVault you can quickly restore just your exchange database exactly as it was minutes prior to failure—minimizing data loss and reducing downtime. It backs up your data on fast and redundant hard drives, not slow and unreliable tape. With a *single touch*, you can often restore and go live in minutes—not hours!

### DigiVault is the Cure

- Safe, efficient and reliable compression; reducing storage up to 91%
- Ability to enable 256-bit encryption to protect data during transmission and storage
- Integrity validation to ensure clean and reliable backups
- Integrates with GOexchange—for clean data

The Exchange data changes so fast, it justifies an application specific CDP. DigiVault is a perfect compliment to traditional backup and adds the advantage of high availability and granular recovery.

### Put Out The Pain

An Exchange crash only has to happen once...before you are scrambling to find this ad to call us. Why not call now, learn how to reduce your risk, and avoid the panic.
