

Tired of Nursing Your Exchange Server?

#1 Best-Seller!

Anyone who has given birth to an Exchange network knows it can get sick and needs some nursing to stay healthy. In fact, 72% of Exchange Administrators surveyed* have “experienced” an Exchange disaster (feels like the flu)—usually from improper feeding and care.

Like many databases, constant adding and deleting can corrupt an Exchange data file so it eventually turns sour. Replicating, archiving and backing up the data doesn’t stop the stink—it just stores it. You’ve got to...

Fix the Problem

You may have tried the free utilities to fix Exchange. While they help, they are too tedious, time consuming and lightweight to keep your Exchange baby healthy. You’ve tried the milk, now try some meat!

Pamper Yourself with GOexchange

It’s time to try GOexchange, from Lucid8, the #1 best-selling automated disaster prevention and optimization software for Microsoft Exchange 5.5, 2000 and 2003. As the mother of all Exchange tools, GOexchange helps prevent disasters, repair problems, improves performance, and saves you a lot of time.

“Without routine maintenance, decreasing performance, increased warnings and errors accumulate and database fragmentation transpires, leading to Exchange disasters.”

Prevent Hiccups

GOexchange removes errors, warnings and inconsistencies within the database—before major corruption makes the database fail.

“GOexchange corrected 2,264 errors and 26 warnings.”

Paul Ramos, Director IT

Run, Don’t Crawl

In addition to fixing the database, GOexchange removes sluggishness and improves performance by re-indexing and defragmenting the database to permanently remove white space and deleted items. The end result is increased performance and stability with a compact efficient database that’s 31 to 55% smaller! Combine this with archiving and the database is up to 91% smaller—making it much quicker to backup.

“..our information stores were reduced by 45-50%.”

Dale Huitt, Systems Lead

Automated Babysitter

First, GOexchange is easy to setup and use. Twenty minutes—that’s all it takes to get your server up and running. Just schedule it, and walk away!

The software notifies the users, validates the database, runs the backup, conducts a comprehensive system analysis and diagnostics, logs the errors, and notifies you if it discovers a “stop” error—then it repairs and defragments the database, generates a thorough report and schedules the next event.

You can do some of this work yourself, but why waste time doing repetitive maintenance, when GOexchange can do it for you—faster and more effectively than doing it by hand.

“Life before GOexchange...was an absolute nightmare, late nights, long weekends and upset users.”

Marty Grogan, CTO

Stop The Crying

Why not call now, or visit our resource site and learn how to reduce the risk, and avoid the pain. Protect your exchange data, maximize performance, and spend a weekend at home—instead of babysitting Exchange.
